# PSA: A Mobile App to Manage Your Reimbursement Accounts

Check reimbursement account balances, submit receipts, and help get the information you need on the go.

One app for many types of accounts

You can use the PacificSource Administrators (PSA) app to manage the following types of accounts:

- Flexible Spending Accounts (FSA)
    - Health and Dependent Care Accounts
- Health Reimbursement Arrangements (HRA)
- Transportation Fringe Benefits
- Premium Reimbursement Plans

Check your balance

Wondering whether you can pay for an elective procedure or cover a mounting bill? Your accounts and their balances are easily viewable, right at the top of the main screen. And you can tap on any account to get a detailed list of account activity.

File a claim, submit a receipt

Filing a claim is almost as easy as depositing a check using a bank app. Just fill in the claim details and use your mobile device to take a photo of the receipt. If you prefer to upload receipts and submit claims later, there's a handy receipt organizer for that, too.

Does it qualify?

If you have an FSA, you have likely wondered whether a particular item is eligible or not. Prescription sunglasses? Over-the-counter medicine? And, recent changes via the CARES Act have expanded the list of qualified items. You can use the app while at the pharmacy to scan a product's bar code to see if it qualifies as a medical expense.

Download it today

The PSA app is available for download from your device's app store. You'll find it by searching "myPacificSource Admin (PSA)". Note that there are two apps with similar names. The other one, called "myPacificSource," is for PacificSource Health Plans, and includes a member ID, a doctor or hospital finder, benefits information, and more.

Once you've downloaded the app, you'll need your username and password from the PSA web page: **PSA.Consumer.PacificSource.com.** The app also enables you to use your fingerprint to login, if your device supports that function.
