Voter Approved Street Repairs Begin Design

Thank you Springfield voters!

**Street repairs are coming to six streets
over the next five years, funded through
General Obligation Bond 20-351.**

What is happening now?

City engineers are working on designs for six street repair projects. Survey work is being conducted in all project areas so you may see surveyors in the area along with crews performing pavement testing.

What do the projects include?

A paving overlay will be applied to the following streets over the next five years. Many of the sidewalk ramps require updates to meet existing Americans with Disabilities Act (ADA) standards and will be constructed with each project.

- Harlow Road from Interstate 5 to the roundabout at Pioneer Parkway
- Aspen Street from Tamarack Street to Centennial Boulevard
- G Street from 10th Street to 23rd Street
- 36th Street from Main Street to Commercial Avenue
- Daisy Street from South 51st Place to Bob Straub Parkway
- 58th Street from Main Street to Thurston Road

Why do the project?

Springfield voters approved a five-year, \$20 million general obligation bond to fund street repairs on a list of priority streets in need of repair. These repairs will extend the useful life of the street.
