

*Today, November 8<sup>th</sup>, at approximately 11:41 am, we were alerted that the Flock camera located at 28th and Olympic detected a stolen vehicle.*

*Since turning off our cameras, we have conducted random checks to ensure they remain inactive and are not collecting data. Upon receiving the alert, we immediately began investigating why this camera had been triggered.*

*Our review determined that the Flock system had identified the camera at 28th and Olympic as being offline and automatically generated a work order for a technician to repair it. The technician completed the repair, which reactivated the camera, yesterday, November 7th. This was the only camera in Springfield still connected to the automated system that monitors and restores camera functionality.*

*The camera has now been turned off again and removed from the automated quality check process. Any data collected during this brief activation will be deleted and not retained.*

*We are sharing this information as part of our continued commitment to transparency with the community as discussions about ALPR technology continue.*

*The stolen vehicle was subsequently recovered by officers.*
